

Warren RECC, Your Trusted Resource for Solar

Warren RECC has a rich history of residential and commercial solar in our service territory. We currently have over 100 members with more than 3 MW of renewable generation installed. We are eager to support any member in their efforts to interconnect renewable generation to the grid. Solar can be a valuable investment for homeowners and businesses, but it's important to understand all of the costs and requirements before you choose any particular system or installer.

If you are considering installing a solar system or if you have been contacted by a company selling solar systems, we encourage you to contact us. We can support you on the research and due diligence before you sign a contract. We have a Solar Checklist that will help guide you through the process of evaluating solar, selecting a contractor, and installation.

We also strongly suggest you consider the following items when considering making an investment in a solar installation:

Beware of any high-pressure sales pitches asking you to sign a contract before you understand the terms.

Solar Power can be an exciting investment with opportunities to save money on your electric bill and help the environment. It is a long-term investment that should be properly evaluated to understand if it is right for you.

Beware of any sales pitch that presents with short or unreasonable deadlines.

Good decisions take time. Reputable solar companies understand that you need time to evaluate and understand the total impact of making the decision to purchase and install solar. Bad apples impose artificial deadlines to pressure you into a quick decision, often before you have the opportunity to research the terms.

Beware of any company that tells you they partner with Warren RECC.

Warren RECC is excited to work with the solar installer of your choice, but we do not currently partner with or recommend any particular installer.

Beware of any company that tells you that Warren RECC does not want you to have solar power.

Warren RECC has a rich history of residential and commercial solar in our service territory. We currently have over 100 members with more than 3 MW of renewable generation installed. We are eager to support any member in their efforts to interconnect renewable generation to the grid.

Beware of any company that tells you that solar power will eliminate your power bill.

When properly designed and installed, solar power will save you money on your power bill. However, unscrupulous installers may overstate those savings in order to get you to sign a contract. If you would like an estimate of the potential savings on your electric bill, please contact us at 270-842-6541. We will be happy to discuss installation options and estimated savings with you.

Beware of any company that tells you that you don't need to contact Warren RECC to install solar.

Warren RECC is eager to support any member that is interested in solar. Since your system will be tied to the power grid, there are several items required to ensure a safe and reliable connection to the grid. You will need to contact Warren RECC during your installation process, regardless of which installer you choose. To understand the full process of installing a solar system, including the required items needed to connect safely to the grid, please contact us at 270-842-6541. We will be happy to walk you through the process.

Beware of social media ads with bait-and-switch type tactics advertising solar.

Installing a solar power system is a big decision with a sizeable financial commitment. Before you choose an installer, take time to do some research. Contact reputable installers in the area. If something sounds too good to be true, it usually is.
